# Web calculator

Download version 5.6 of PHP(PHP Storm).

Download XAMPP.

Open XAMPP click start in the Apache Module, wait until the module status is green.

Place the file 'php.exe' found in the folder C:\Xampp\PHP, as the php interpreter in the php editor.

On the Editor, click the file Calculator.html and click run on google chrome.

The display is divided in two parts, the upper part of the display shows the current arithmetic operation, the other part of the display shows the result of the arithmetic operation, after "=" is clicked.

"=" operates the result of the arithmetic operation as follows:

The keys /,*,+,- are used to make arithmetic operations

← serves as backspace of the current expression in the upper part of the display

C erases both the content of upper and lower screens.
